

# Is Your Business Ready for AI?

5-minute self-assessment to find out where you stand.

Most business owners wait until they're overwhelmed before considering AI automation. But the best time to automate is **before the bottleneck breaks you** — not after.

Complete this checklist to identify which AI systems will have the biggest impact on your business right now.

## How This Works

Check every box that applies to your business. Count your total checks. At the end, you'll get a personalized action plan based on your score.

## The 15 Signs You're Ready

### Lead Management & Response Time

- Leads wait more than 30 minutes for a first response
- You miss enquiries on weekends or after 6 PM
- Team manually follows up with every new lead
- You lose track of leads that didn't convert immediately

### Repetitive Admin & Questions

- Your team answers the same 5-10 questions every day
- Staff spend time sending appointment confirmations manually
- Follow-ups and reminders are handled one-by-one
- You manually transfer lead info between systems

### Sales & Qualification Process

- Sales reps waste time on unqualified leads

- Your team doesn't know budget/timeline before first call
- First calls are mainly fact-finding, not closing
- You have no formal lead scoring or qualification system

### Operational Risk & Dependencies

- One person's absence stalls your intake process
- New staff take 2+ weeks to learn the response scripts
- Your processes live in someone's head, not a system

# Your Readiness Score

Count how many boxes you checked. Find your score range below to see your action plan.

| Checks | Readiness Level     | Priority                           |
|--------|---------------------|------------------------------------|
| 0-3    | Not Yet Ready       | Focus on manual process first      |
| 4-7    | Ready to Start      | Begin with 1-2 quick wins          |
| 8-11   | Automation Critical | Deploy full AI stack now           |
| 12-15  | Urgent              | Revenue at serious risk without AI |

## Your Action Plan by Score

### 0-3 Checks: Not Yet Ready

You're in good shape operationally. Focus on optimizing manual processes before introducing automation. Wait until at least 4 signs apply.

### 4-7 Checks: Ready to Start

You have clear pain points that AI can solve. Start with these quick wins:

- **Week 1:** Deploy WhatsApp AI responder for FAQ handling (2-4 hours/day saved)
- **Week 2:** Add appointment booking automation via AI
- **Week 3:** Set up lead scoring for hot/warm/cold routing

**Expected ROI: 10-15 hours/week saved, 20-30% faster lead response time.**

### 8-11 Checks: Automation Critical

You're losing significant revenue to manual bottlenecks. Deploy the full AI stack:

- **Immediate:** AI receptionist (24/7 call handling + booking)
- **Week 1:** Lead qualifier (WhatsApp + voice, routes to CRM)
- **Week 2:** Automated follow-up sequences (email + SMS)

- **Week 3:** Connect all systems to unified dashboard

**Expected ROI: 30-40 hours/week saved, 50-80% faster response, zero missed leads.**

### **12-15 Checks: Urgent — Revenue at Risk**

You're bleeding revenue daily. This is a business-critical deployment. Recommend professional setup to get live in 3-5 days:

- **Day 1:** Full audit of current bottlenecks (we can do this free)
- **Day 2-3:** Deploy AI receptionist + qualifier simultaneously
- **Day 4:** Connect CRM, calendar, SMS confirmations
- **Day 5:** Team training + go-live monitoring

**Expected ROI: 50+ hours/week saved, 2-3x faster sales cycle, zero operational dependencies.**

## **Next Steps**

No matter your score, start with one system. Master it. Then add the next. The businesses that win don't automate everything at once — they automate the highest-pain, lowest-nuance tasks first.

**Ready to deploy AI?**
